Zinsser Introduces OKON® S-20 and OKON® S-40 Penetrating Water-Repellent Sealers

Somerset, NJ—Zinsser is pleased to introduce two ready to use, water-base penetrating silane/siloxane water-repellent sealers for concrete and masonry: OKON® S-20 Penetrating Water-Repellent Sealer and OKON® S-40 Deep Penetrating Water-Repellent Sealer.

Specially formulated for dense concrete surfaces, OKON® S-20 is ideal for vertical or horizontal cast concrete, tilt-up, stucco and brick. OKON® S-40 is a deep penetrating sealer that was developed for normal weight concrete block, porous brick, precast and poured in place concrete. It is also great for above grade horizontal concrete wearing surfaces including pavers.

Breathable, clear and non-yellowing, these high performance sealers let the beauty and texture of decorative concrete show through. Formulated with a penetrating silane/ siloxane formula to react with the silica, OKON® S-20 and OKON® S-40 protect against the damaging effects of water absorption, including water intrusion, efflorescence and freeze-thaw damage, without changing the texture or hiding the underlying substrate.

OKON® S-20 and OKON® S-40 are low VOC, very low odor and offer easy soap and water clean-up. Typically one coat systems, they resist high alkalinity, chloride salts and blushing. Plus, they are backed by a 5 year warranty for qualifying projects.

OKON® Water-Repellent Sealers protect most interior or exterior, vertical or horizontal concrete and masonry surfaces—like decorative concrete block, cast concrete, stucco, bricks, natural stone and more. For more information, visit www.okoninc.com. Or call 732-469-8100.
